# String clad options

In our quotes we offer cladding of the aprons and internal/ external strings as an optional extra. See below for some photos both with and without the string clad option.

## Internal string

This photo shows an internal string without cladding, the customer has painted it white. The oak below the glass is the baserail which is part of the standard renovation.

Here is the internal string clad in oak veneer with a solid oak trim.

## External string and apron

This is an external string without cladding, again the customer has painted it white.

This photo shows the external string clad which has been completed with oak and oak veneer.

The apron is the section of external string clad which runs horizontally under the landing balustrade.
